

Akash Kotkar

> Tailored CV generated from cv.md only. No unsupported facts added.

Relevant Summary

Technical Product Analyst with 5+ years of experience working on complex, data-intensive platforms across hospitality-tech, fintech, and ecommerce. Specialized in API-driven workflows, bulk data ingestion systems, and functional system analysis, with a strong track record of improving data reliability, issue resolution speed, and product usability at scale.

Most Relevant CV Facts

- Coordinated cross-functional collaboration across technical, administrative, and research teams to keep project delivery smooth and structured. _(source: cv.md:86)_
- Acted as the key liaison between product, engineering, and QA to triage functional/data/technical issues. _(source: cv.md:64)_
- Mentored developers and QA while strengthening E2E testing with detailed scenarios and edge-case coverage. _(source: cv.md:67)_
- Built reconciliation logic for BSE/NSE datasets and implemented data cleansing protocols. _(source: cv.md:74)_
- Managed multi-stakeholder technical projects, aligning deliverables with EU/academic requirements and ensuring on-time execution through KPI, risk, and milestone tracking. _(source: cv.md:85)_
- API analysis (REST / SOAP) _(source: cv.md:23)_
- Agile (SAFe) _(source: cv.md:31)_
- Gap analysis _(source: cv.md:35)_
- Process documentation _(source: cv.md:53)_
- Enabled scalable handling of complex hotel pricing structures with thousands of rate/price plans. _(source: cv.md:62)_
- Designed API workarounds and improved Excel template logic to ensure smooth customer operations. _(source: cv.md:65)_
- Conducted API testing for client classification and data extraction. _(source: cv.md:75)_
- Built ML-based decision support tool to reduce inventory holding costs under lead-time uncertainty. _(source: cv.md:92)_
- Supported data operations for 6,000+ hotels with highly complex pricing structures through high-volume bulk updates (thousands of API calls per upload) via structured data workflows. _(source: cv.md:109)_

Matching Skills

Summary

Technical Product Analyst with 5+ years of experience working on complex, data-intensive platforms across hospitality-tech, fintech, and ecommerce. Specialized in API-driven workflows, bulk data ingestion systems, and functional system analysis, with a strong track record of improving data reliability, issue resolution speed, and product usability at scale.

Core Skills

Technical

- Bulk data ingestion designs
- API integration
- Cross-system data consistency
- RCA on production issues

Data and Integration

- API analysis (REST / SOAP)
- JSON / XML payload validation
- ETL workflow validation
- VBA macros
- Data transformation

Methods

- Agile (SAFe)
- Backlog prioritization
- Cross-team collaboration
- E2E testing
- Gap analysis

Tools

- Postman
- Bruno
- Swagger
- Jira
- Confluence
- GitHub
- Bitbucket
- Python automation

Documentation

- Functional specs
- Technical specs
- User guides
- Process documentation

Work Experience

Product Definition Analyst at Amadeus (Astek)

Aug 2024 - Present

- Led functional evolution of the platform's bulk data ingestion workflow (Excel -> CSV -> API).
- Enabled scalable handling of complex hotel pricing structures with thousands of rate/price plans.
- Supported high-volume onboarding via multi-sheet CSV uploads generating thousands of API calls.
- Acted as the key liaison between product, engineering, and QA to triage functional/data/technical issues.
- Designed API workarounds and improved Excel template logic to ensure smooth customer operations.
- Aligned stakeholders on system constraints to drive realistic, scalable onboarding solutions.
- Mentored developers and QA while strengthening E2E testing with detailed scenarios and edge-case coverage.

Business Analyst at Finwizard Technology

Oct 2022 - Mar 2024

- Optimized KYC workflows through client segmentation, reducing documentation requirements.
- Built reconciliation logic for BSE/NSE datasets and implemented data cleansing protocols.
- Conducted API testing for client classification and data extraction.

Business Analyst at Firstcry.com

May 2022 - Sep 2022

Technical Project Manager at IMT Atlantique

Dec 2020 - Apr 2022

- Managed multi-stakeholder technical projects, aligning deliverables with EU/academic requirements and ensuring on-time execution through KPI, risk, and milestone tracking.
- Coordinated cross-functional collaboration across technical, administrative, and research teams to keep project delivery smooth and structured.

Machine Learning Intern at IMT Atlantique

Apr 2020 - Sep 2020

- Built ML-based decision support tool to reduce inventory holding costs under lead-time uncertainty.

Education

MSc Management & Optimization of Supply Chain, Transport

IMT Atlantique, Nantes, France

Sep 2018 - Dec 2020

Bachelors of Mechanical Engineering

S.P.P.U.-Pune Universite, Pune, India

Jun 2013 - July 2017

Key Impacts

- Reduced root cause identification time from approximately 2 days to 2-3 hours for production issues.
- Supported data operations for 6,000+ hotels with highly complex pricing structures through high-volume bulk updates (thousands of API calls per upload) via structured data workflows.
- Improved logistics efficiency by 14% FTL utilization through optimization algorithms.
- Developed inventory optimization models across 21 warehouses, improving stock allocation efficiency.
- Built a box-packing optimization algorithm that increased full-truckload utilization by 14%.
- Automated key logistics workflows in Python, reducing late deliveries by 10%.

Positioning

- Specialist in understanding, scaling, and stabilizing complex data workflows in large systems.
- Focus: API-driven platforms, bulk data ingestion, functional system analysis.
